Raising a request for Authority to Access through Permitted is for access only. Works should be planned and approved before the access permit process begins.

Authority to Access (WAPs*) are required every time you need to access any portion of the site.

The mandatory requirements for an Authority to Access request (ATA) must contain:

- The scope of work being performed (including inspections)
- Where the work will be conducted
- The date and time required
- All individual(s) that will be attending site.

Authority to Access requests (WAPs*) will be reviewed to determine if the request to access site is valid and all information provided is sufficient.

° Tip

Once you have created your first ATA, you can duplicate a new ATA from a previously approved one.

Navigate into your approved ATA and select the "More" option and then "Create from WAP". This will then copy all your details across (Scope of work, locations, attendees, attached documents and risk identification questions). You will just need to select the new dates and modify any details that have changed.

🖉 Support

Queries around the type of work, hazards, locations, dates/times can be raised with your Site Contact.

Queries around issues with Permitted (logging in, adding attendees, additional sites) are managed by the Transurban Service Desk.

Phone: 1 855 337 5880 Email: <u>TechnologyServiceDesk@transurban.com</u>

Request an Authority to Access

Any individual with a site ready permitted account can create an Authority to Access (ATA) request.

- 1. Select Create > Create WAP. Then select the Transurban USA Site
- 2. Select the zone from the "Select Zone" drop down list (I-95, I-395 or I-495)
- 3. Enter a description of the purpose of the access in the "Scope of Works" field. On the first line, provide a summary about what the works entail. Continue to provide more detailed information about what the works are for and where you will need access to.
- 4. Select all the dates access is required for using the "Select Dates" calendar. You can select up to 5 calendar days from the current date. Select the site arrival and finish time for each date and select Next. Please contact your Transurban contact if the dates/times you need are not shown.
- 5. Search for the names of attendees who will also need access as part of this ATA (additional attendees can be added to an ATA at a later stage)
- Search and add all required locations you will need to access. Search for locations using terms like 'Mainline', 'Ramp', 'Tolling', 'VMS' etc. or select from your recently used locations below. Once all required locations have been added, scroll to the bottom and select next. (Refer to page 2 - for a list of all locations).
- 7. Enter the number of keys required and provide the Maximo Work Order number (if applicable).
- 8. Complete the Risk Identification questionnaire and answer all validation questions and upload any required documents.
- 9. Read and "Accept" the ATA Agreement and Confirmation statement and select next. After accepting the Agreement and Confirmation statement the ATA request will move to 'Pending Approval' and Transurban will review your permit.

Ő

When arriving to site, contact the Traffic Control Room prior to the commencement of works. Contact the Traffic Control Room again when leaving site.

*WAPs – "Work Authority Permits" is the term used in Permitted for an Authority to Access.

Reviews can take up to 10 business days. Editing the ATA will reset this 10-day lead time.
